

FORCE AND MOTION REVIEW

- _____ 1. Acceleration
- _____ 2. Velocity
- _____ 3. Inertia
- _____ 4. Net Force
- _____ 5. Force
- _____ 6. Displacement
- _____ 7. Motion
- _____ 8. Speed

- A. push or pull that acts on an object, causing it to move, change speed or direction, or stop moving.
- B. change in position or place.
- C. how far an object moved from its original position and in what direction the object moved.
- D. rate at which the position of an object changes.
- E. rate at which an object's velocity changes.
- F. rate at which an object moves in a certain direction.
- G. tendency of a still or moving object to resist a change in its motion.
- H. force that results from the combination of all forces that act on an object

Which of Newton's Three Laws Applies? Law 1, 2, or 3?

- ___ When you put a book on a table the table pushes on the book.
- ___ A person is pushed forward into their seatbelt when a car stops.
- ___ A larger car takes more force to move.
- ___ A person leans on a wall and the wall pushes back.
- ___ A brick sits on a table until you push on it.

Speed (S) or Velocity (V)

- ___ A person walks 3.5 mph.
- ___ A bird flies 20 m/s.
- ___ A bike goes 30 m/s toward town.

Speed vs. Time

Which graph segments fit the following:

Constant speed:

Deceleration:

Accelerating:

Understanding Net Force

Which way will it accelerate?

The unit of force is the _____.

Force = _____ \times _____

Average speed = _____ \div _____

If a person pulls on a cart to the right with a force of 10 N and a second person pulls to the left with a force of 3 N, what is the net force (and direction) on the cart?

If a person is pushing a cart with a force of 40 N and it accelerates at 0.5 m/s^2 , what is the mass of the cart?

What is the acceleration of a 3 kg rock that is thrown with a force of 18 N?

A 50 kg object is accelerating at a rate of 5 m/s. Calculate the force needed to produce this acceleration.

A car travels 2.5 hours in a northerly direction for 300 km. Determine the car's speed and velocity.

time =

distance =

direction =

A woman drives to the grocery store. During the trip, the woman drives a constant speed of 35 mph for 5 minutes, and then stops at a stop sign. After waiting for traffic, the woman drives an additional 20 minutes at 60 mph before parking in the grocery store parking lot. Circle the distance/time graph that best matches the woman's journey. Justify your answer.

Examples of Motion: Are the following examples representing SPEED, VELOCITY OR ACCELERATION?

1. A greyhound dog can run about 40 mi/hr. _____
2. Monarch butterflies fly 12 mi/hr south as they migrate. _____
3. A car slows from 60 mi/hr to 25 mi/hr. _____
4. A car turns left while maintaining the same speed. _____
5. A trip from Austin to Dallas takes about 3 hours going 65 mi/hr north. _____
6. Canadian geese can fly approximately 75 miles in 3 hours. _____
7. A car increases speed from 30 mi/hr to 65 mi/hr. _____
